Over-The-Counter Plan B Coverage

Following FDA's ruling in 2013, the Maryland Medicaid Pharmacy Program now allows female recipients of any age to obtain Plan B without a prescription. Claims for OTC Plan B may be submitted electronically in much the same manner as claims for condoms. Enter the NPI number of the pharmacy in both the Prescriber ID field and the Provider ID field (fields 411-DB and 201-B1 respectively).

The pharmacist must create a document, sign it and have the recipient sign it when the Plan B is dispensed. This document should be retained in the same manner as a prescription. There is a limit of one Plan B prescription per month.
